## Manitou North America adds a RT105 to its New Compact Equipment Line

### Gehl unveils its most compact telescopic handler and track loader

**West Bend, Wis.**— Manitou North America is pleased to announce the new RT105 track loader, strengthening its product offering to our already large track loader line up.

The Gehl RT105 track loader is a stand-out as the most compact in the market yet still delivering an impressive rated operating capacity of 1,050 pounds. This machine can work on the tightest jobsites with an overall width of 50.8" and height of 71.5", and it is easy to transport at 4,720 pounds. It is powered by a 35 hp Yanmar engine with 80 ft-lbs of torque, and a diesel particulate filter exhaust system saves on maintenance and the environment. Gehl built the RT105 track loader on an adapted R105 skid loader chassis for 85% parts commonality, a cost savings for those that own both models.

The Gehl RT105 track loader features Gehl's patented IdealTrax™ track tensioning system. IdealTrax™ saves on maintenance and track replacement costs by automatically tensioning the tracks when the engine is on, eliminating the chance of over-tensioning and extending the life of the tracks up to 15%. Track tension is released when the engine is turned off, reducing strain on sprockets and bearings. With IdealTrax™, there is no need for manually tensioning the tracks and changes in the field are quick and simple.

The Gehl RT105 compact track loader is compatible with most allied track loader attachments. Using Gehl's exclusive All-Tach® universal attachment system, it can easily transform to fit the project. From the weekend warrior to the construction site, the Gehl RT105 compact track loader delivers high-performance in a compact platform.
