

RAISE YOUR VISIBILITY

VIEW TO THE REAR
FROM THE CAB

ALL-NEW

SINGLE JOYSTICK CONTROL WITH TRAVEL DIRECTION

GEHL RS SERIES TELESCOPIC HANDLERS OFFER CLEAR SIGHT LINES
Where other machines struggle, the Gehl RS Series are real serious when it comes to 360 degree visibility, even to the rear of the machine.

The Gehl RS Series GEN:3 Telescopic Handlers are sure to raise the visibility for your operation. Excellent visibility to all sides of the machine allows the operator to avoid jobsite obstacles, provides better visibility to workers outside the cab, and aids in precise placement of materials.

The GEN:3 Telescopic Handlers offer a single joystick control that places boom extension and retraction, attachment tilt, auxiliary hydraulics AND travel direction all on the same joystick.

Find your local dealer on gehl.com for more information on the RS Series Telescopic Handlers.
